

Your flexible **Skid Modules** Partner

Looking for a reliable skid construction partner who can assemble your (specialised) components to the highest quality standards? No need to search any further!

A. de Jong B.V. understands the process, materials, functionality and applications of skids. We are efficient in what we do, whether it concerns **hydrogen, petrochemical, chemical, energy, water, process industries or large-scale thermal systems** in the built environment, we are at home in your world.

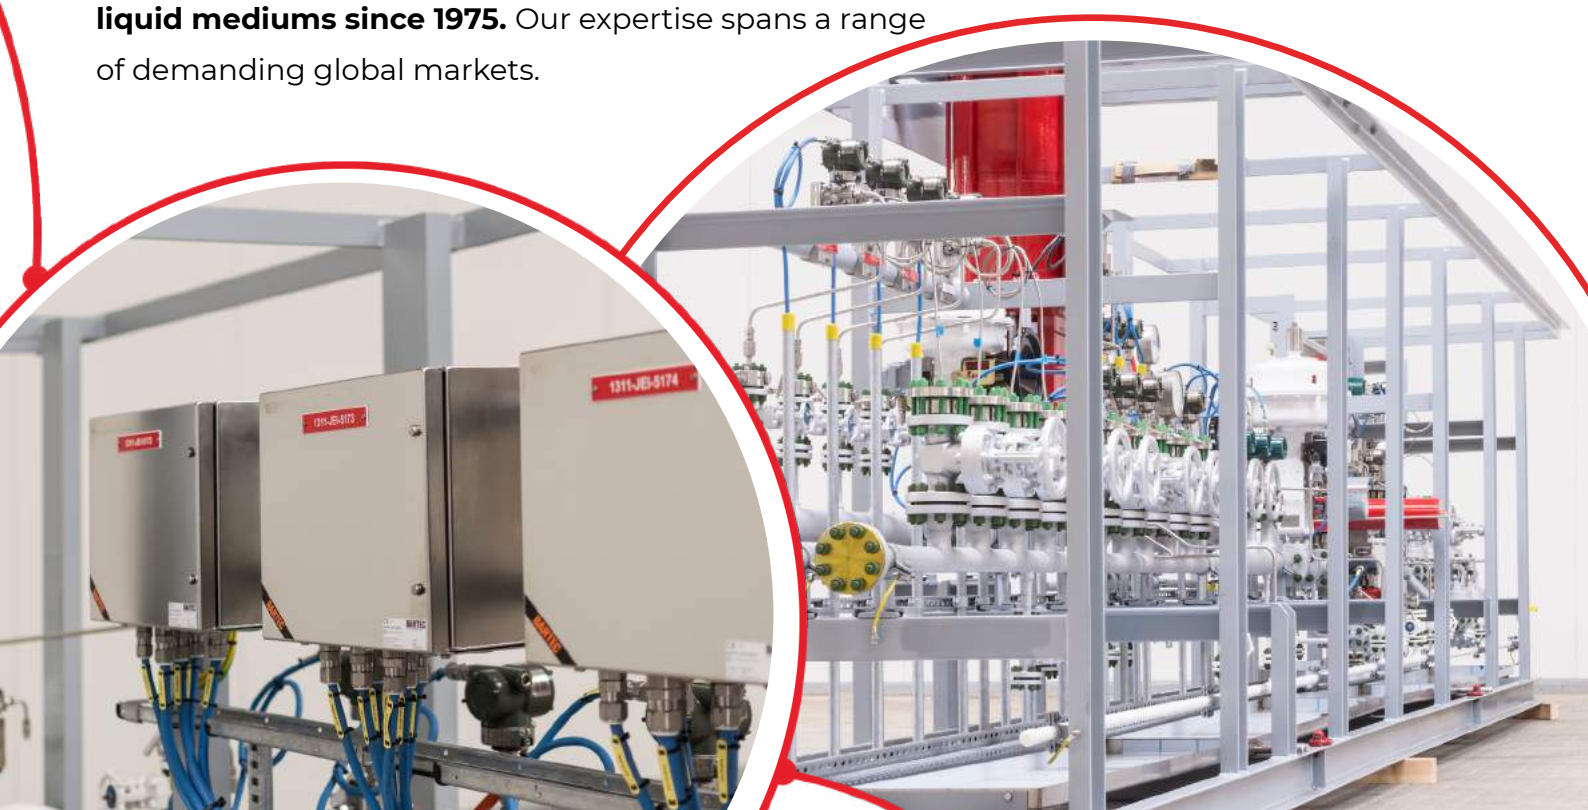

One Stop Shop...

for all your project requirements. We offer a comprehensive range of services, **ranging from manufacturing to complete turnkey (EPMI) services.** We take on any one or more of the **Engineering**, and/or **Project Management** and procurement, and/or **Manufacturing** responsibilities for your skid modules in our offices and workshop. In addition we provide **Installation** services at your site.

Our customers...

are diverse and include EPC contractors, industrial service partners, factory owners, engineering firms and leading Original Equipment Manufacturers (OEMs) of critical components in industrial applications. Such as combustion, filtration, separation, pumping, compression, flow measurement, pressure reduction and heat exchangers.

We have been designing and manufacturing skid, pipe and valve systems for gases and liquid mediums since 1975. Our expertise spans a range of demanding global markets.

A diverse range of industries...

are directly supplied by us. **Energy, (petro)chemical and process industries, as well as biogas, biofuel, biowaste, pulp and paper industries.** We have the expertise and resources for the electrical, control and safety systems required for your skid.
